

[Windform XT Gets the Green Light from the EPO for a European Patent Grant](#)

February 20, 2009 - CRP Technology is pleased to announce that the European Patent Office has now finally completed the novelty examination of the European Patent Application N° EP1634693 of CRP Technology concerning Windform® XT and, as a consequence has officially communicated its intention to grant the corresponding patent.

Windform® XT is a new generation composite material developed and produced by CRP Technology. Its mechanical characteristics make it an excellent and suitable material for Rapid Manufacturing. WindForm® XT consists of a matt black-coloured polyamide base compound with carbon fiber inclusions that give it brilliant highlights. It's the reference point in the market for high performance materials and permits the fabrication of finished, "ready-to-use" parts.

CRP Technology is focused on the important goals of successfully offering the international market high-value services, while meeting high quality standards and providing internationally patented new-concept products as in the case of Windform XT.

Thanks to its own R&D department, today CRP Technology can offer a wide range of Windform materials that put it among the best qualified and skilled companies for plastic Rapid Manufacturing. Using commercially-available machinery we're able to create any kind of prototype or pre-series or small series production runs.
