

## New Polyamide-Based Material

Windform™ FX is a new-generation, polyamide-based material whose mechanical and repeatable characteristics make it particularly well-suited for rapid manufacturing applications.

White-colored Windform FX is characterized by exceptional resistance and resilience to repeated bending and torsion solicitations, excellent crash resistance, consistency and

behavior similar to polypropylene and ABS-stamped parts. Windform FX is perfect for obtaining accurate, reliable and long-lasting prototypes; no further treatments are needed. It is particularly appropriate for functional applications and can be used for the following applications: flexible components, functional parts with clicks or zips. In addition, ducts of a complex shape, with thin walls, particularly for aerospace and motorsports, dashboards and grids, fenders, fans and connectors, are only a few examples of its infinite possibilities.
